attention
 1.To keep the activity of the battery, avoid not using the battery for more than two months.
 2.When screwing and connecting to charger, you have to take extra care of your strength, and stop screwing when the indicator light turn red.

Product Introduction

This new product has been developed with our newest atomizer and cartridge technology. This new generation of E - Cig product is equipped with the atomizer and the cartridge compactly within the inhaler unit. With such new E - Cig product, you will be able to feel and smoke much more like a cigarette than any other products. It is easy to use and to inhale with plenty of smoking, and it lasts much longer than any other products.

This new type of atomizer is combined with the cartridge, so that when you buy a cartridge you will get oneatomizer at the same time, and you will change the atomizer whenever you change the cartridge. The quality of the cartridge and the atomizer are much better than any other products and you will never worry about the atomizer any more.

It is so compact and useful, how ever it is inexpensive. The cartridge can be used much longer, with much more smoke than any other type of E-Cigarette. One cartridge is equivalent to at least 16 cigarettes normally. It is ideal for men or women who like to enjoy and satisfy those tactile smokeing sensations.

Components of the Product

E-Cig Product

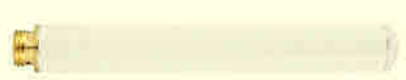

USB Adapter

(EU)

or Power Charger

E-Cig Battery

E-Cartridge

(US)

Components of the Product

E-Cig Products are healthy and environmental protecting electronic atomizing devices. The essentially differences between the E-Cig Products and the ordinary cigarettes are as follows:

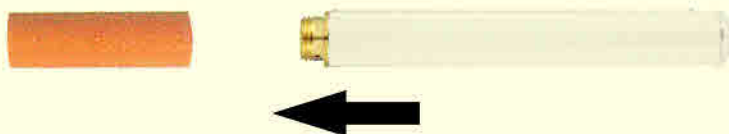

- No tar and any other carcinogenic substance or harmful ingredients to human body.
- No ignition required, no danger hence will not lead to the over 4000 chemical substances produced by the ordinary cigarettes, like carbon monoxide.
- Harmless to others as well as the environment, without the danger of second - hand smoking.
- No possibility to cause fire. It can be used safely in most No - smoking places.
- E - Cig Products are designed according to Nicotine replacement therapy recommended by World Health Organization (WHO). According to the smoke - quitting procedure, the target of quitting smoke can be reached non - painfully within a certain period of time.

How to use

Screw and connect the battery with the atomized cartridge.

The electronic circuit will start to work as the cartridge is inhaled by mouth. Stopping inhaling will terminate the atomization, and operating mode will turn to standby state.

One ordinary cigarette equals about 14 - 16 pulls, so after smoking 14 - 16 puffs of the atomized cartridge, it's better that the smoker stops smoking about half an hour before smoking again.

Charging

- When smoke becomes less or the indicator light begins to dark, it indicates that you need to recharge the battery with the special charger.
- Screw and connect the battery with the USB adapter.
- Put the USB adapter into the power charger (or into the USB connector of computer or car charger).
- The input supply voltage of the charger is AC100V - 240V, 50/60Hz.

After the battery being charged for 2 to 3 hours, the red LED light of the USB adapter will turn to green and red alternately, the step will take about half an hour. When the indicator light turns to green steadily, it means the battery is fully charged. Disconnect the battery and cut off the charger's power supply.

Charging Process:

- Stable current charging (2 - 3 hours)
- Stable voltage charging (half an hour)
- Fully charged

Troubleshooting

Less smoke or no smoke

- The battery is running out ----- please charge or change the battery.
- Improper connection between battery and cartridge ----- Screw the cartridge tightly.
- Preheat the atomizer ----- deeply inhale 2-3 mouthful.
- If you inhale the cartridge for too long time, the E-Liquid inside could be used up and you might get some burnt smell ----- please change the cartridge.

Cautions

- Do not put the liquid into mouth or contact with mucous membrane.
- Please keep it out of children 's reach.
- Keep the cartridge in a cool and dry place.
- Keep it away from high temperature environment in use, storage or charge.
- Stop use the battery when it is found out of service.
- Take extra care of the microelectronic component, and keep it properly to avoid damages to it caused by collision.
- After smoking 14 - 16 puffs of the atomized cartridge, plwase stop smoking about half an hour before smoking again.
- Please strictly abide by relevant local laws and reglations on driving. Don' t use the E-Cig Products while driving.

Specifications

Model	E-Cig E8	E-Cig E9
Power source	DC3.5v (lithium battery componets)	
Dimensions	Short Battery: 59mm,85mm (with Cartridge) Long Battery: 72mm,98mm (with Cartridge)	Short Battery: 73mm,103mm (with Cartridge) Long Battery: 88mm,118mm (with Cartridge)
Weight	Short Battery: 6.7g, 10.2g (with Cartridge) Long Battery: 8.4g, 11.8g (with Cartridge)	Short Battery: 9.5g, 14g (with Cartridge) Long Battery: 13g, 17.5g (with Cartridge)
